# AVTRON ACCel500 EXPANDER I/O AND ADAPTER I/O BOARDS 

## SECTION I

## GENERAL INFORMATION

There is a wide range of expander and adapter boards that can be used to increase the I/O capacity of the ACCel500 frequency converter.

The ACCel500 frequency converter's input and output configuration is designed with modularity in mind. The total I/O is composed of option boards, each having its own input and output configuration. The boards contain not only normal analog and digital inputs and outputs, but also fieldbuses and additional application-specific hardware.

The basic, expander, and adapter boards are placed in the board slots on the control board of the frequency converter. The I/O boards are usually interchangeable between different types of ACCel500 frequency converters. However, the control boards of these types differ from each other to some extent which means that the use of some I/O boards in different ACCel500 frequency converter types may be restricted.

## 1-1 SLOTS ON THE ACCel500 FREQUENCY CONVERTER CONTROL BOARD

The control board is situated inside the control unit of the ACCel500 frequency converter. There are five board slots (labeled A to E) on the control board. The connectability of different option boards to different slots depends greatly on the type of the board. For more information on this, see section 1.2. See also the descriptions of the options boards in Section III.

Usually, when the frequency converter is delivered from the factory, the control unit includes at least the standard compilation of two basic boards (I/O board and relay board) which are normally installed in slots A and B. The I/O boards mounted at the factory are indicated in the type code of the frequency converter. The three expander slots ( $\mathrm{C}, \mathrm{D}$ and E ) are available for different option boards, that is, I/O expander boards, fieldbus boards, and adapter boards.

Figure 1-1. Board Slots on Control Board of the ACCel500 Frequency Converter

## 1-2 OPTION BOARD TYPES

The Avtron option boards are divided in four groups according to their characteristics: types A, B, C, and D. Short descriptions of the types below:

## OPT-A_

- Basic boards used for basic I/O; normally pre-installed at the factory
- This board type uses slots A, B, or C.

See section 3-1 for a detailed presentation of the boards of this type. See also the principle diagram on the options boards and their equipment in Table 4-1.

## OPT-B

- Option boards used for I/O expansion
- Normally pluggable into slots B, C, D, or E

See section 3-2 for a detailed presentation of the boards of this type. See also the principle diagram on the options boards and their equipment in Table 4-1.

## OPT-C_

- Fieldbus boards (e.g. Profibus or Modbus)
- These boards are connected to slots D or E.

See a separate manual on each individual Fieldbus board. Ask the factory or your nearest distributor for more information.

## OPT-D_

- Adapter boards
- Boards with fiber optic adapters, for example, System Bus Fiber Optic adapter board.
- Connect the adapter boards to slots D or E (see section 3-3.3 for more information).

See section 3-3 for a detailed presentation of the boards of this type. See also the principle diagram on the options boards and their equipment in Table 4-2.

## 1-3 TECHNICAL DATA

The data in the table below applies to the inputs and outputs on all basic and expander boards.

## TABLE 1-1. TECHNICAL DATA

| Safety (all boards) | Comply with EN50178,C-UL, and EN60204-1 <br> Inputs/Outputs galvanically isolated; Isolation voltage rate 500 V |
| :---: | :---: |
| Input/output type | Specification |
| ANALOG inputs (AI), voltage | 0 to $\pm 10 \mathrm{~V}, \mathrm{R}_{\mathrm{i}} \geq 200 \mathrm{k} \Omega$, single-ended; <br> Resolution 10 bits $/ 0.1 \%$, accuracy $\pm 1 \%$ of the full display ( -10 to +10 V joystick control) |
| ANALOG inputs (AI), current | $0(4) \ldots 20 \mathrm{~mA}, \mathrm{R}_{\mathrm{i}}=250 \Omega$, differential <br> Resolution 10 bits $/ 0.1 \%$, accuracy $\pm 1 \%$ of the full display |
| Digital inputs (DI), DC voltage controlled | 24 V : "0" $\leq 10 \mathrm{~V}, ~ " 1 " \geq 18 \mathrm{~V}, \mathrm{R}_{\mathrm{i}}>5 \mathrm{k} \Omega$ |
| Digital inputs (DI), AC voltage controlled | $\begin{aligned} & \text { Control voltage } 42 \ldots . .240 \mathrm{VAC} \\ & " 0 "<33 \mathrm{~V}, " 1 ">35 \mathrm{~V} \\ & \hline \end{aligned}$ |
| Auxiliary voltage (output) (+24V) <br> Auxiliary voltage (input) (ext. +24 V ) | $24 \mathrm{~V}( \pm 15 \%)$, max 250 mA (total summarized load from ext. +24 V outputs, max. 150 mA from one board. <br> $24 \mathrm{VDC}( \pm 10 \%$, max. ripple voltage 100 mV RMS), max. 1 A . <br> In special applications where PLC type functions are included in the control unit the input can be used as external auxiliary power supply for control boards as well as I/O boards. |
| Reference voltage (output) $\left(+10 \mathrm{~V}_{\text {ref }}\right)$ | $10 \mathrm{~V}-0 \%-+2 \%$, max. 10 mA |
| ANALOG output (AO), current (mA) | 0 (4) to $20 \mathrm{~mA}, \mathrm{R}_{\mathrm{L}}<500 \Omega$, resolution 10 bits/ $0.1 \%$, accuracy $\leq \pm 2 \%$ |
| ANALOG output (AO), voltage (V) | 0 (2) to $10 \mathrm{~V}, \mathrm{RL} \geq 1 \mathrm{k} \Omega$, resolution 10 bits, accuracy $\leq \pm 2 \%$ |
| Relay outputs (RO) | Switching capacity $24 \mathrm{VDC} / 8 \mathrm{~A}$ 250VAC/8A <br> $125 \mathrm{VDC} / 0.4 \mathrm{~A}$ <br> Max. continuous load 2A rms <br> Min. switching load: $5 \mathrm{~V} / 10 \mathrm{~mA}$ |
| Thermistor input (TI) | $\mathrm{R}_{\text {trip }}=4.7 \mathrm{k} \Omega$ (PTC type) |
| Encoder control voltage $(+5 \mathrm{~V} /+12 \mathrm{~V} /+15 \mathrm{~V} /+24 \mathrm{~V})$ | See OPT-A4, OPT-A5, OPT-A7, OPT-AE and OPT-BB technical data |
| Encoder connections (inputs, outputs) | See OPT-A4, OPT-A5, OPT-A7, OPT-AE and OPT-BB technical data |
| Environment (all boards) |  |
| Ambient operating temperature | -10 to $55^{\circ} \mathrm{C}$ |
| Storing temperature | -40 to60 ${ }^{\circ} \mathrm{C}$ |
| Humidity | <95\%, no condensation allowed |
| Altitude | Max 1000 m |
| Vibration | 0.5 G at 9 to 200 Hz |

## 1-3.1 ISOLATION

The control connections are isolated from the mains potential and the I/O ground is connected directly to the frame of the frequency converter. Digital inputs and relay outputs are isolated from the I/O ground. For digital input arrangements, see section 1-3.5, Digital Input Signal Conversions.

## 1-3.2 ANALOG INPUTS (mA/V)

ANALOG inputs of I/O boards can be used as either current inputs or voltage inputs (see detailed description of each board). The signal type is selected with a jumper block on the board. In case the voltage type input is used you still have to define the voltage range with another jumper block. The factory default value for the ANALOG signal type is given in the description of the board. For detailed information, see the description of the board in question.

## 1-3.3 ANALOG OUTPUTS (mA/V)

In the same way as in the analog inputs, the output signal type (current/voltage) can be selected with jumper except for some expander boards with analog outputs used only with current signals.

## 1-3.4 CONTROL VOLTAGE (+24V/EXT + 24V)

The control voltage output $+24 \mathrm{~V} / \mathrm{EXT}+24 \mathrm{~V}$ can be used in two ways. Typically, the +24 V control voltage is wired to digital inputs through an external switch. The control voltage can also be used to power-up external equipment, such as encoders and auxiliary relays.

Observe that the specified total load on all available $+24 \mathrm{~V} / \mathrm{EXT}+24 \mathrm{~V}$ output terminals may not exceed 250 mA . The maximum load on the $+24 \mathrm{~V} / \mathrm{EXT}+24 \mathrm{~V}$ output per board is 150 mA . See Figure 1-2.

Figure 1-2. Maximum Loads on $+24 \mathrm{~V} / \mathrm{EXT}+24 \mathrm{~V}$ Output

The $+24 \mathrm{~V} / E X T+24 \mathrm{~V}$ outputs can further be used to externally power-up the control board as well as the basic and expander boards. If an external power supply is connected to EXT +24 V output, the control board, basic boards and expander boards remain live even if mains should be lost on the frequency converter. This ensures sufficient functioning of the control logic (not the motor control, however) and some alarms in exceptional power-loss situations. Furthermore, fieldbus links remain powered which enables, for example, the Profibus Master to read valuable data on the frequency converter. The power unit is not powered through the EXT +24 V and therefore the motor control does not work if the mains is lost.

Requirements for an external power back-up:

- output voltage $+24 \mathrm{DC} \pm 10 \%$, max. ripple voltage 100 mV RMS
- max. current 1 A
- 1A external fuse (no internal short-circuit protection on the control board

NOTE: ANALOG outputs and inputs do not work with only +24 V supplied to the control unit.
If there is a $+24 \mathrm{~V} / \mathrm{EXT}+24 \mathrm{~V}$ output on the board, it is short-circuit protected locally. Should one of the $+24 \mathrm{~V} / \mathrm{EXT}+24 \mathrm{~V}$ outputs short circuit, the others would remain powered because of the local protection.

## 1-3.5 DIGITAL INPUT SIGNAL CONVERSION

The active signal level depends on which potential the common input CMA (and CMB if available) is connected to. The alternatives are +24 V or Ground (0V). See Figure 1-3, Figure 1-4 and Figure 1-5.

The 24 -volt control voltage and the ground for the digital inputs and the common input (CMA) can be either internal or external.

Some typical input signal conversion examples are shown below. If you use the internal +24 V from the frequency converter, the following arrangements are possible:

If CMA is connected to GND with an inboard jumper, the internal +24 V is used and the CMA terminal is not wired.

Figure 1-3. CMA is Connected to GND with Inboard Jumper

If you use an external +24 V , the following arrangements are possible:
When CMA is isolated from GND using an onboard jumper, the input is active when the switch is closed.

Figure 1-4. Positive Logic with External +24 V

Figure 1-5. Negative logic with external +24 V

You can make the positive and negative logic arrangements also with the internal +24 V . Place the jumper block in the 'CMA isolated from GND' position (as above) and wire the CMA terminal to the GND terminal of the frequency converter.

## 1-4 HARDWARE PROTECTIONS

## 1-4.1 TERMINAL BLOCK CODING

In order to avoid incorrect connections of terminal blocks to boards, some terminal blocks as well as related terminal connectors on the board are uniquely coded. For more information, see the description of the individual board.

## 1-4.2 BOARD SLOT GUIDES AND ALLOWED SLOTS

You cannot mount an option board into any slot. Table 4-1 and Table 4-2 show which slots are allowed for which option boards. For reasons of safety, slots A and B are protected in hardware against mounting of disallowed boards. If a disallowed board is mounted in slots $\mathrm{C}, \mathrm{D}$ and E , the board just will not work. There is no danger of injury to personnel or damage to equipment.

Figure 1-6. Board Guide to Prevent Incorrect Mountings

## 1-5 TYPE IDENTIFICATION NUMBER

Each ACCel500 option board has a unique type designation code. Besides the type designation code, each board has a unique Type identification number which is used by the system program to identify which board is plugged into which board slot. The system program and the application use the Type ID also to establish the needed connections in order to achieve the desired functionality of the available I/O boards in the control unit. The ID code is loaded in the memory of the board.

## 1-6 DEFINING A TERMINAL FOR A CERTAIN FUNCTION WITH ADDaptACC PROGRAMMING TOOL

If you use the ADDaptACC Programming Tool, you will have to establish the connection between the function and input/output in the same way as with the control panel. Just pick the address code from the drop-down menu in the Value column (see Figure 1-7).

Figure 1-7. Using ADDaptACC Programming Tool to Enter the Address Code

NOTE: In order to avoid function overruns and to ensure flawless operation, do not connect two functions to the same output.

The inputs, unlike the outputs, cannot be changed in RUN state.

## 1-7 OPTION BOARD RELATED PARAMETERS

Some of the input and output functions of certain option boards are controlled with associated parameters. The parameters are used to set the signal ranges for ANALOG inputs and outputs as well as values for different encoder functions.

The board-related parameters can be edited in the Expander Board Menu (M7) of the control keypad.

Enter the following menu level (G\#) with the Menu button right. At this level, you can browse through slots A to E with the Browser buttons to see what expander boards are connected. On the lowermost line of the display, you also see the number of parameters associated with the board. Edit the parameter value as shown below. See Figure 1-8. For more information on the keypad operation, see the ACCel500 Software Manual.

Figure 1-8. Board Parameter Value Editing

NOTE: Fieldbus boards (OPT-C_) also have fieldbus-related parameters. These boards are described in the separate fieldbus board manuals.

## SECTION II

## INSTALLATION OF OPTION BOARDS

NOTE: It is not allowed to add or replace option boards or fieldbus boards on a frequency converter with the power switched on. This may damage the boards.

## 2-1 CONTROL CABLES

The control cables used shall be at least 20 AWG $\left(0.5 \mathrm{~mm}^{2)}\right.$ screened multicore cables. The maximum terminal wire size is 14 AWG $\left(2.5 \mathrm{~mm}^{2}\right)$ for the relay terminals and 16 AWG $\left(1.5 \mathrm{~mm}^{2}\right)$ for other terminals.

Find the tightening torques of the option board terminals in the table below.
TABLE 2-1. TIGHTENING TORQUES OF TERMINALS

| Terminal Screw | Tightening Torque |  |
| :--- | :---: | :---: |
|  | $\mathbf{N m}$ | $\mathbf{l b}-\mathbf{i n}$ |
| Relay and thermistor terminals (screw M3) | 0.5 | 4.5 |
| Other terminals(screw M2.6) | 0.2 | 1.8 |

TABLE 2-2. CABLE TYPES REQUIRED TO MEET STANDARDS

| Cable type | Level H, C | Level L |
| :--- | :---: | :---: |
| Control cable | 4 | 4 |

Level H = EN 61800-3+A11, 1st environment, restricted distribution EN 61000-6-4

Level L = EN61800-3, 2nd environment
4 = Screened cable equipped with compact low-impedance shield.

## 2-1.1 CABLE GROUNDING

We recommend grounding the control cables in the manner presented above.
Strip the cable at such distance from the terminal that you can fix it to the frame with the grounding clamp.

Figure 2-1. Grounding of control cable

## 2-2 BOARD INFORMATION STICKER

Each I/O option board package delivered by the factory includes a sticker (shown below) where possible modifications made in the frequency converter are noted. Please check Option board (1), mark the board type (2), the slot into which the board is mounted (3) and the mounting date (4) on the sticker. Finally, attach the sticker on your drive.

## SECTION III

## DESCRIPTIONS OF OPTION BOARDS

## 3-1 BASIC BOARDS OPT-A

- Basic boards used for basic I/O; normally pre-installed at the factory
- This board type uses slots A, B and C.

The standard ACCel500 frequency converters contain two boards placed in slots A and B. The board in slot A (OPT-A1, OPT-A8 or OPT-A9) has digital inputs, digital outputs, analog inputs and an analog output. The board in slot B (OPT-A2) has two change-over relay outputs. As an alternative to OPT-A2, a board of type OPT-A3 can also be placed in slot B. In addition to the two relay outputs, this board has one thermistor input.

The boards you wish to have installed in your frequency converter have to be defined in the type designation code of the frequency converter when ordering it from the factory.

TABLE 3-1. ACCel500 BASIC BOARDS AND THEIR EQUIPMENT

| I/O Board | Allowed Slots | DI | DO | AI | AO | RO | TI | Other |

## 3-1.1 OPT-A1

Figure 3-1. Avtron OPT-A1 Option Board

Description: Standard I/O board with digital inputs/outputs and ANALOG inputs/outputs
Allowed slots: A
Type ID: 16689
Terminals:
Two terminal blocks (coded = mounting of blocks in wrong order prevented, terminals \#1 and \#12); Screw terminals (M2.6)
Jumpers: 4; X1, X2, X3 and X6 (See Figure 3-2)
Board parameters: Yes (see Table 3-3)

TABLE 3-2. OPT-A1 I/O TERMINALS (coded terminals grayed)

| Terminal |  | Parameter Reference on Keypad and ADDaptACC | Technical information |
| :---: | :---: | :---: | :---: |
| 1 | +10 Vref |  | Reference output +10V; Maximum current 10 mA |
| 2 | AI1+ | An.IN:A. 1 | Selection V or mA with jumper block X1 (see page 3-4): <br> Default: $0-+10 \mathrm{~V}(\mathrm{Ri}=200 \mathrm{k} \Omega)$ <br> (-10V...10V Joy-stick control, selected with ajumper) $0-20 \mathrm{~mA}(\mathrm{Ri}=250 \Omega)$ <br> Resolution $0.1 \%$; Accuracy $\pm 1 \%$ |
| 3 | AI1- |  | Differential input if not connected to ground; Allows $\pm 20 \mathrm{~V}$ differential mode voltage to GND |
| 4 | AI2+ | An.IN:A. 2 | Selection V or mA with jumper block X2 (see page 3-4): <br> Default: $0-20 \mathrm{~mA}(\mathrm{Ri}=250 \Omega)$ $0-+10 \mathrm{~V}(\mathrm{Ri}=200 \mathrm{k} \Omega)$ <br> (-10V..+10V Joy-stick control, selected with a jumper) <br> Resolution: 0.1\%; Accuracy $\pm 1 \%$ |
| 5 | AI2- |  | Differential input if not connected to ground; Allows $\pm 20 \mathrm{~V}$ differential mode voltage to GND |
| 6 | $24 \text { Vout (bi- }$ directional) | 9 | 24 V auxiliary voltage output. Short-circuit protected. $\pm 15 \%$, maximum current 150 mA , see 1.4.4 +24 Vdc external supply may be connected. Galvanically connected to terminal \#12. |
| 7 | GND | $\bullet$ | Ground for reference and controls Galvanically connected to terminals \#13,19. |
| 8 | DIN1 | DigIN:A. 1 | Digital input 1 (Common CMA); $\mathrm{R}_{\mathrm{i}}=\min .5 \mathrm{k} \Omega$ |
| 9 | DIN2 | DigIN:A. 2 | Digital input 2 (Common CMA); $\mathrm{R}_{\mathrm{i}}=\min .5 \mathrm{k} \Omega$ |
| 10 | DIN3 | DigIN:A. 3 | Digital input 3 (Common CMA); $\mathrm{R}_{\mathrm{i}}=\min .5 \mathrm{k} \Omega$ |
| 11 | CMA |  | Digital input common A for DIN1, DIN2 and DIN3. Connection by default to GND. <br> Selection with jumper block X3 (see page 3-4): |
| 12 | 24 Vout (bidirectional) |  | Same as terminal \#6 <br> Galvanically connected to terminal \#6. |
| 13 | GND |  | Same as terminal \#7 <br> Galvanically connected to terminals \#7 and 19 |
| 14 | DIN4 | DigIN:A. 4 | Digital input 4 (Common CMB); $\mathrm{R}_{\mathrm{i}}=\min .5 \mathrm{k} \Omega$ |
| 15 | DIN5 | DigIN:A. 5 | Digital input 5 (Common CMB); $\mathrm{R}_{\mathrm{i}}=\min .5 \mathrm{k} \Omega$ |
| 16 | DIN6 | DigIN:A. 6 | Digital input 6 (Common CMB); $\mathrm{R}_{\mathrm{i}}=\min .5 \mathrm{k} \Omega$ |
| 17 | CMB |  | Digital input common B for DIN4, DIN5 and DIN6. Connection by default to GND. <br> Selection with jumper block X3 (see page 3-4): |
| 18 | AO1+ | AnOUT:A. 1 | ANALOG output |
| 19 | AO1- | - | Output signal range: <br> Current 0(4)-20mA, RL max $500 \Omega$ or <br> Voltage $0-10 \mathrm{~V}, \mathrm{RL}>1 \mathrm{k} \Omega$ <br> Selection with jumper block X6 (see page 3-4): <br> Resolution: 0.1\% (10 bits); Accuracy $\pm 2 \%$ |
| 20 | DO1 | DigOUT:A. 1 | Open collector output Maximum $\mathrm{U}_{\mathrm{in}}=48 \mathrm{VDC}$ <br> Maximum current $=50 \mathrm{~mA}$ |

## Jumper Selections

There are four jumper blocks on the OPT-A1 board. The factory defaults and other available jumper selections are presented below.

Figure 3-2. Jumper Block Selection on OPT-A1

## OPT-A1 Parameters

TABLE 3-3. OPT-A1 BOARD-RELATED PARAMETERS

| Number | Parameter | Min | Max | Default | Note |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | AI1 mode | 1 | 5 | 3 | $\begin{aligned} & 1=0 \text { to } 20 \mathrm{~mA} \\ & 2=4 \text { to } 20 \mathrm{~mA} \\ & 3=0 \text { to } 10 \mathrm{~V} \\ & 4=2 \text { to } 10 \mathrm{~V} \\ & 5=-10 \text { to }+10 \mathrm{~V} \end{aligned}$ |
| 2 | AI2 mode | 1 | 5 | 1 | $\begin{aligned} & 1=0 \text { to } 20 \mathrm{~mA} \\ & 2=4 \text { to } 20 \mathrm{~mA} \\ & 3=0 \text { to } 10 \mathrm{~V} \\ & 4=2 \text { to } 10 \mathrm{~V} \\ & 5=-10 \text { to }+10 \mathrm{~V} \end{aligned}$ |
| 3 | AO1 mode | 1 | 4 | 1 | $\begin{aligned} & 1=0 \text { to } 20 \mathrm{~mA} \\ & 2=4 \text { to } 20 \mathrm{~mA} \\ & 3=0 \text { to } 10 \mathrm{~V} \\ & 4=2 \text { to } 10 \mathrm{~V} \\ & \hline \end{aligned}$ |

## 3-1.2 OPT-A2

Description: Standard ACCel500 frequency converter relay board with two relay outputs
Allowed slots: B
Type ID:
16690
Terminals: Two terminal blocks; Screw terminals (M3); No coding
Jumpers: None
Board parameters: None

TABLE 3-4. OPT-A2 I/O TERMINALS

## 3-1.4 OPT-A4

Description: Encoder board for ACCel500. Encoder input board with programmable control voltage for an encoder

The encoder board OPT-A4 is for TTL type encoders (TTL, TTL(R)) providing input signal levels that meet the RS_422 interface standard. Encoder inputs A, B and Z are not galvanically isolated. The OPT-A4 board includes, too, the qualifier input ENC1Q (meant to trace the Z-pulse in certain situations) and a special/fast digital input DIC4 (used to trace very short pulses). These two inputs are used in special applications.

The TTL type encoders do not have an internal regulator and use therefore a supply voltage of $+5 \mathrm{~V} \pm 5 \%$ whereas the $\mathrm{TTL}(\mathrm{R})$ type encoders have an internal regulator and the supply voltage can be e.g. $+15 \mathrm{~V} \pm 10 \%$ (depending on the encoder manufacturer).
Allowed slots: C
Type ID: 16692
Terminals: One terminal block; Screw terminals (M2.6); Coding in terminal \#3.
Jumpers: $\quad 2 ; \mathrm{X} 4$ and X5 (see page 26)
Board parameters: Yes (see Table 3-7)

## 3-1.5 OPT-A5

Description: Encoder board for ACCel500. Encoder input board with programmable control voltage for an encoder.

The OPT-A5 board is designed for HTL (High voltage Transistor Logic) type encoders (voltage output type push-pull HTL, open collector output type HTL) which provide input signal levels dependent on the supply voltage of the encoder. The encoder inputs A, B and Z are galvanically isolated. The OPT-A5 board also includes the qualifier input ENC1Q (meant to trace the Z-pulse in certain situations) and a fast digital input DIC4 (used to trace very short pulses). These two inputs are used in special applications.

The OPT-A5 is similar to the OPT-A4 in connections but the encoder inputs $A, B$ and $Z$ have different signal levels (voltage level). The input levels for A, B and Z of the OPT-A4 are compatible with RS-422 while those of the OPT-A5 are more general wide range inputs. Inputs ENC1Q and DIC4 are identical in both boards.
Allowed slots: C
Type ID:
16693
Terminals: One terminal block; Screw terminals (M2.6); Coding in terminal \#3. Jumpers: $\quad 4 ;$ X2, X4, X5, X6 (see Jumper Selections)
Board parameters: Yes (see Table 3-7)

TABLE 3-8. OPT-A5 I/O TERMINALS (coded terminal grayed)

| Terminal |  | Parameter Reference on <br> Keypad and ADDaptACC | Technical information |
| :---: | :--- | :--- | :--- |
| 1 | DIC1A+ |  | Pulse input A (differential); Voltage range 10...24V |
| 2 | DIC1A- |  |  |
| 3 | DIC2B+ |  | Pulse input B; phase shift of 90 degrees compared to Pulse input <br> A (differential); Voltage range 10...24V |
| 4 | DIC2B-- |  | Pulse input Z; one pulse per revolution (differential); <br> Voltage range 10...24V |
| 5 | DIC3Z+ |  |  |
| 6 | DIC3Z- |  | Reserved for future use |
| 7 | ENC1Q |  | Reserved for future use |
| 8 | DIC4 |  | Ground for control and inputs ENC1Q and DIC4 |
| 9 | GND |  | Control voltage (auxiliary voltage) output to encoder; <br> Output voltage selectable with jumper X4. See section 1-3.4. |
| 10 | $+15 \mathrm{~V} /+24 \mathrm{~V}$ |  | Cane us |

NOTE: Encoder inputs are wide range inputs that can be used with encoders using +15 V or +24 V

## Technical Data

| Encoder control voltage, $+15 \mathrm{~V} /+24 \mathrm{~V}$ | Control voltage selectable with jumper X4. |
| :--- | :--- |
| Encoder input connections, <br> inputs $\mathrm{A}+, \mathrm{A}-, \mathrm{B}+, \mathrm{B}-, \mathrm{Z}+, \mathrm{Z}-$ | Max. input frequency $\leq 150 \mathrm{kHz}$ |
| Inputs A, B and Z are differential |  |, | Max. input frequency $\leq 10 \mathrm{kHz}$ |
| :--- |
| Qualifier input ENC1Q |
| Fast digital input DIC1 | | Migital input $24 \mathrm{~V} ; \mathrm{Ri}>5 \mathrm{k} \Omega$ |
| :--- |
| Digital input is single-ended; connected to GND |

NOTE: A high pulse frequency combined with a great cable capacitance places a considerable load on the encoder. Apply,therefore, as low a voltage as possible for the encoder supply, rather lower than 24 V . The manufacturer also recommends placing jumper X 4 to position +15 V , if allowed in the voltage range specification of the encoder.

## Jumper Selections

On the OPT-A5 board, there are four jumper blocks; X4 is used to program the control voltage (auxiliary voltage), X2, X5 and X6 are set according the voltage of the encoder. The factory default and other available jumper selections are presented below.

## Jumper block X4: <br> Auxiliary voltage level

Jumper blocks X2, X5 and X6:
encoder voltage level

Auxiliary voltage +15 V

## Jumper blocks X2, X5 and X6:

When these jumpers are set to High (default and typically good for 24 V encoders), it means that when the voltage at the channel goes above 8 V , it will acknowledge a new pulse.

When they are set to Low $=2.3 \mathrm{~V}$, it means that when the voltage at the channel goes abov2.3V, it will acknowledge a new pulse.

Usage: Closed Loop Vector Control. The OPT-A5 board is mainly used in conventional industrial applications where encoder cable lengths are relatively long.

## Encoder Connection - Single-Ended

Figure 3-4. HTL type Encoder Connection (Open Source) using Single-Ended Inputs

NOTE: Grounding is to be connected only at the frequency converter to avoid circulating current in the shield. Isolate shield at the encoder.

It is recommended to use double shielded cable for encoder connection.

Figure 3-5. HTL type Encoder Connection (Open Collector) using Single-Ended Inputs

NOTE: Grounding is to be connected only at the frequency converter to avoid circulating current in the shield. Isolate shield at the encoder.

It is recommended to use double shielded cable for encoder connection.

## Encoder Connection - Differential

Figure 3-6. HTL type encoder connection using differential inputs

## OPT-A5 Parameters

See Table 3-7.

3-1.6 OPT-A7

Description: Duplicate encoder board for ACCel500. Encoder input board with programmable control voltage for the encoder.

The OPT-A7 board is designed for HTL (High voltage Transistor Logic) type encoders (voltage output type push-pull HTL, open collector output type HTL) which provide input signal levels dependent on the supply voltage of the encoder. The encoder inputs $\mathrm{A}, \mathrm{B}$ and Z are galvanically isolated. The OPT-A7 board includes, too, the qualifier inputs ENC1Q and ENC2Q meant to trace positions in positioning applications.

The board can be used as both Master and Slave device. The encoder input signal is repeated on the board and carried to the next device through the digital output.
Allowed slots: C
Type ID: $1 \quad 6695$
Terminals: Two terminal blocks; Screw terminals (M2.6); Coding in terminals \#3 and \#14.
Jumpers: $\quad 4 ;$ X4, X5, X15 and X16 (see Jumper Selections in section 3-1.5)
Board parameters: None

TABLE 3-9. OPT-A7 I/O TERMINALS

| Terminal |  | Parameter Reference on | Technical information |
| :---: | :---: | :---: | :---: |
| 1 | DIC1A+ |  | Pulse input A (differential); Voltage range 10...24V |
| 2 | DIC1A- |  |  |
| 3 | DIC2B+ |  | Pulse input B; phase shift of 90 degrees compared to Pulse input A (differential); Voltage range $10 \ldots 24 \mathrm{~V}$ |
| 4 | DIC2B- |  |  |
| 5 | DIC3Z+ |  | Pulse input Z; one pulse per revolution (differential); Voltage range 10...24V |
| 6 | DIC3Z- |  |  |
| 7 | ENC1Q |  | Qualifier input. Single-ended input with GND |
| 8 | ENC2Q |  | Qualifier input. Single-ended input with GND |
| 9 | GND |  | Ground for control and inputs ENC1Q and ENC2Q |
| 10 | $+15 \mathrm{~V} /+24 \mathrm{~V}$ |  | Control voltage (auxiliary voltage) output to encoder; Output voltage selectable with jumper X4. |

| 17 | DOD1A+ |  | Pulse output A (differential), output voltage +24 V . Pulse input DIC1A or DID1A is internally repeated in the card and connected to the DOD1A output. |
| 18 | DOD1A- |  |  |
| 19 | DOD2B+ |  | Pulse output B (differential), output voltage +24 V . Pulse input DIC2A or DID2A is internally repeated in the card and connected to the DOD2A output. |
| 20 | DOD2B- |  |  |

## NOTE:

Encoder inputs are wide range inputs that can be used with encoders using +15 V or +24 V .

## Technical Data

| Encoder control voltage, +15V/+24V | Control voltage selectable with jumper X4. |
| :--- | :--- |
| Encoder input connections, <br> inputs $\mathrm{A}+, \mathrm{A}-, \mathrm{B}+, \mathrm{B}-, \mathrm{Z}+, \mathrm{Z}-$ | Max. input frequency $\leq 150 \mathrm{kHz}$ |
| Inputs $\mathrm{A}, \mathrm{B}$ and Z are differential |  |

NOTE: A high pulse frequency combined with a great cable capacitance places a considerable load on the encoder. Apply therefore as low a voltage as possible for the encoder supply, rather lower than 24 V . The manufacturer also recommends placing jumper X 4 to position +15 V , if allowed in the voltage range specification of the encoder.

## Jumper Selections

On the OPT-A7 board, there are four jumper blocks. Jumper X4 is used to program the control voltage (auxiliary voltage). The setting of jumper X5 defines the encoder channel (DIC/DID) used to carry the signal to the repeater. The setting of jumpers X15 and X16 is changed according to whether the board is used as a Master or Slave device. The factory default and other available jumper selections are presented below.

Usage: Closed Loop Vector Control, positioning applications. The OPT-A7 encoder board is mainly used in demanding system applications, e.g. when measuring the motor speed with two encoders.

## Encoder Connection

The figures below present examples of a chain connection of several OPT-A7 boards (Figure 3-7) and a connection of two encoders to the OPT-A7 option board (Figure 3-8).

Figure3-7. Connection of Encoder and Three OPT-A7 Boards

Figure 3-8. Connection of two encoders to OPT-A7 board

## 3-1.7 OPT-A8

Description: ACCel500 basic I/O board similar to OPT-A1 except that the ANALOG inputs and output are galvanically isolated.
Allowed slots: A
Type ID:
16696
Terminals: Two terminal blocks; Screw terminals (M2.6); Coding in terminals \#1 and \#12.

Jumpers: $\quad 4 ; \mathrm{X} 1, \mathrm{X} 2, \mathrm{X} 3$ and X6 (see Table 3-11)
Board parameters: Yes (see Table 3-12)

3-1.8 OPT-A9

Description: ACCel500 basic I/O board similar to the OPT-A1 except that the I/O terminals are bigger (for 2.5 mm 2 wires; M3 screws).
Allowed slots: A
Type ID: 16697
Terminals: Two terminal blocks; Screw terminals (M3); Coding in terminals \#1 and \#12.
Jumpers: $\quad 4 ;$ X1, X2, X3 and X6 (see Figure 3-2)
Board parameters: Yes (see Table 3-3)

I/O terminals on OPT-A9
See Table 3-2.
Jumper Selections
See Figure 3-2.

## OPT-A9 Parameters

See Table 3-3.

## 3-1.9 OPT-AE

Description: Encoder board for ACCel500. Encoder input board with programmable control voltage for an encoder.

The OPT-AE board is designed for HTL (High voltage Transistor Logic) type encoders (voltage output type push-pull HTL, open collector output type HTL) which provide input signal levels dependent on the supply voltage of the encoder. The encoder inputs A, B and Z are galvanically isolated.

In addition, the board includes an Encoder Direction Signal and an Encoder Pulse Output Signal. The Encoder Direction Signal value ' 1 ' indicates a backward motor direction and ' 0 ' a forward motor direction. The Encoder Pulse Output signal is produced from The Encoder input signals (channel A) divided by the divider parameter (see Table 3-13).
Allowed slots: C
Type ID: 16709
Terminals: One terminal block; Screw terminals (M2.6); Coding in terminal \#3.
Jumpers: $\quad 1$; X4
Board parameters: Yes

TABLE 3-13. OPT-AE I/O TERMINALS (CODED TERMINAL GRAYED)

|  | Terminal | Parameter Reference on Keypad and ADDaptACC | Technical information |
| :---: | :---: | :---: | :---: |
| 1 | DIC1A+ |  | Pulse input A (differential); Voltage range 10 to 24V |
| 2 | DIC1A- |  |  |
| 3 | DIC2B+ |  | Pulse input B; phase shift of 90 degrees compared to Pulse input A (differential); Voltage range 10 to 24 V |
| 4 | DIC2B- |  |  |
| 5 | DIC3Z+ |  | Pulse input Z; one pulse per revolution (differential); Voltage range 10 to 24 V |
| 6 | DIC3Z- |  |  |
| 7 | DO1 |  | Encoder divider output. Encoder input signals are divided by divider parameter (see Table 3-14). |
| 8 | DO2 |  | Encoder direction output. The signal value ' 1 ' means that the motor direction is backward and ' 0 ' is forward. |
| 9 | GND |  | Ground for control |
| 10 | $+15 \mathrm{~V} /+24 \mathrm{~V}$ |  | Control voltage (auxiliary voltage) output to encoder; Output voltage selectable with jumper X4. |

Note: Encoder inputs are wide range inputs that can be used with encoders using +15 V or +24 V .

## Technical Data

| Encoder control voltage, $+15 \mathrm{~V} /+24 \mathrm{~V}$ | Control voltage selectable with jumper X4. |  |
| :--- | :--- | :---: |
| Encoder input connections, | Max. input frequency $\leq 150 \mathrm{kHz}$ |  |
| inputs A+, A-, B+, B-, Z+, Z- | Inputs A, B and Z are differential |  |
| Encoder divider output DO1, | Max.load voltage | 60 VDC |
| Encoder direction output DO2 | Max. load current | 50 mA |
|  | Max. output frequency $\quad \leq 300 \mathrm{kHz}$ |  |

## Jumper Selections

On the OPT-AE board, there is one jumper block used to program the control voltage (auxiliary voltage). The factory default and other available jumper selections are presented below.

Usage: Closed Loop Vector Control. The OPT-AE board is mainly used in conventional industrial applications where encoder cable lengths are relatively long.

## Encoder Connection - Single-Ended

Figure 3-9. HTL-Type Encoder Connection (Open Source) Using Single-Ended Inputs
NOTE: Grounding is to be connected only at the frequency converter to avoid circulating current in the shield. Isolate shield at the encoder.

It is recommended to use double shielded cable for encoder connection.

Figure 3-10. HTL-Type Encoder Connection (Open Collector Using Single-Ended Inputs)

NOTE: Grounding is to be connected only at the frequency converter to avoid circulating current in the shield. Isolate shield at the encoder.

It is recommended to use double shielded cable for encoder connection.

## Encoder Connection - Differential

| 7.3.1.5 | Hysteresis for Direction Out | 0 | 511 | 8 | Number of pulses before direction signal change state |

## 3-1.10 OPT-AL

Description: Dual I/O expander board with six 42... 240 VAC digital inputs, 2 analog inputs, two analog output, one digital output and 15 and 24 V out.
Allowed slots: A
Type ID: 16716
Terminals:
Two terminal blocks; Screw terminals (M2.6, 1,5 mm2 wire terminals $1-10$; M3, 2.5 mm 2 wire terminals 11-18); No coding
Jumpers: None
Board parameters: None

TABLE 3-15. I/O TERMINALS ON OPT-AL

| Terminal |  | Parameter Reference on Keypad and ADDaptACC | Technical information |
| :---: | :---: | :---: | :---: |
| 1 | +15 V |  | 15 V out - together with terminal 2 max 200 mA |
| 2 | +15 V |  | 15 V out |
| 3 | AI1 | An.IN:A. 1 | Analog input $0-10 \mathrm{~V}$ |
| 4 | AI2 | An.IN:A. 2 | Analog input $\pm 10 \mathrm{~V}$ |
| 5 | GND |  | Ground for analog signals |
| 6 | AO1+ | AnOUT:A. 1 | Analog output 0 (4)-20 mA |
| 7 | AO2+ | AnOUT:A. 2 | Analog output 0-10 V |
| 8 | DO1 |  | Open collector digital output , $48 \mathrm{~V}, 50 \mathrm{~mA}$ allowed |
| 9 | GND |  | Ground for analog signals |
| 10 | $+24 \mathrm{~V}$ |  | 24 V out - max 200 mA |
| 11 | ACIN1 | DigIN:X. 1 | Digital input, $42 \ldots 240$ VAC (threshold 35V) Control voltage: " 0 " $<33 \mathrm{~V}, ~ " 1 ">35 \mathrm{~V}$ |
| 12 | ACIN2 | DigIN:X. 2 | Digital input, $42 \ldots 240$ VAC (threshold 35V) Control voltage: " 0 " $<33 \mathrm{~V}, ~ " 1 ">35 \mathrm{~V}$ |
| 13 | ACIN3 | DigIN:X. 3 | Digital input, $42 \ldots 240$ VAC (threshold 35V) Control voltage: " 0 " $<33 \mathrm{~V}, ~ " 1 ">35 \mathrm{~V}$ |
| 14 | ACIN4 | DigIN:X. 4 | Digital input, 42... 240 VAC (threshold 35V) Control voltage: "0" $<33 \mathrm{~V}$, "1">35V |
| 15 | ACIN5 | DigIN:X. 5 | Digital input, $42 \ldots 240$ VAC (threshold 35V) Control voltage: " 0 " $<33 \mathrm{~V}, ~ " 1 ">35 \mathrm{~V}$ |
| 16 | ACIN6 | DigIN:X. 6 | Digital input, $42 \ldots 240$ VAC (threshold 35V) Control voltage: " 0 " $<33 \mathrm{~V}, ~ " 1 ">35 \mathrm{~V}$ |
| $\begin{aligned} & 17 \\ & 18 \end{aligned}$ | COMMON |  | Common input for DI1-6 |

Note: Digital input 6 can be programmed for other uses but it is also hardwired to function as a Global Stop input that directly inhibits the working of the ASIC modulator and thus stops the drive.

## 3-2 I/O Expander Boards OPT-B_

- Option boards used for I/O expansion
- This board type can normally be plugged into slots B, C, D or E.

The number of control inputs and outputs on your Avtron frequency converter can be increased with the I/O Expander boards. This kind of boards can usually be placed in any board slot inside the frequency converter control unit except for slot A .

There are no board-related parameters for OPT-B_I/O expander boards (except for board OPT-BB).

The boards you wish to have installed in your frequency converter have to be defined in the type designation code of the frequency converter when ordering it from the factory.

TABLE 3-15. ACCEL500 I/O EXPANDER BOARDS AND THEIR EQUIPMENT

| I/O <br> Board | Allowed <br> Slots | DI | AI | TI | AO | DO | RO | Pt-100 | 42-240 <br> VAC <br> Input | Other |

## 3-2.1 OPT-B1

Description: ACCel500 I/O expander board with six bidirectional terminals.
Allowed slots: B, C, D, E
Type ID: 16945
Terminals: One terminal block; Screw terminals (M2.6); No coding
Jumpers: $\quad$ 2; X2 and X4 (see Figure 3-12)
Board parameters: None

TABLE 3-16. OPT-B1 I/O TERMINALS

| Terminal |  | Parameter Reference on <br> Keypad and ADDaptACC | Technical information |

## Jumper Selections

On the OPT-B1 board, there are two jumper blocks. The jumper block X2 is used to define the bidirectional terminal as either input or output. The other jumper block, X 4 , is used to connect the common terminals to GND. The factory default and other available jumper selections are presented below.

Figure 3-12. Jumper Positions for OPT-B1

## 3-2.2 OPT-B2

Description: ACCel500 I/O expander board with a thermistor input and two relay outputs.
Allowed slots: $\quad$ B, C, D, E
Type ID: 16946
Terminals: Three terminal blocks; Screw terminals (M3); No coding Jumpers: None
Board parameters: None

TABLE 3-17. OPT-B2 I/O TERMINALS

| $\begin{aligned} & 28 \\ & 29 \end{aligned}$ | $\begin{aligned} & \hline \text { TI1+ } \\ & \text { TI1- } \end{aligned}$ | DigIN:X. 1 | Thermistor input (galvanically isolated) $\mathrm{R}_{\text {trip }}=4.7 \mathrm{k} \Omega$ |

NOTE: This expander board can be placed into four different slots on the control board. Therefore, the ' X ' given in the Parameter reference shall be replaced by the slot letter ( $\mathrm{B}, \mathrm{C}, \mathrm{D}$, or E) depending on the slot which the expander board is plugged into. See section 1-7.

## 3-2.3 OPT-B4

Description: ACCel500 I/O expander board with one galvanically isolated ANALOG input and two galvanically isolated ANALOG outputs (standard signals 0(4) to 20 mA ).
Allowed slots: $\quad \mathrm{B}, \mathrm{C}, \mathrm{D}, \mathrm{E}$
Type ID: 16948
Terminals: One terminal block; Screw terminals (M2.6); No coding
Jumpers: None
Board parameters: None

## TABLE 3-18. OPT-B4 I/O TERMINALS

| Terminal |  | Parameter Reference on Keypad and ADDaptACC | Technical information |
| :---: | :---: | :---: | :---: |
| 1 | AI1+ | AnIN:X. 1 | $0(4)$ to $20 \mathrm{~mA} ; \mathrm{Ri}=250 \Omega$; galvanically isolated Resolution 10 bits $/ 0.1 \%$; Accuracy $\pm 1 \%$ of the full display |
| 2 | AI1- |  |  |
| 3 | AO1+ | AnOUT:X. 1 | $0(4)$ to 20 mA ; RL<500 ; Resolution 10 bits/0.1\%; Accuracy $\leq \pm 2 \%$ (galvanically isolated) |
| 4 | AO1- |  |  |
| 5 | AO2+ | AnOUT:X. 2 | $0(4)$ to $20 \mathrm{~mA} ; \mathrm{RL}<500 \Omega$; Resolution 10 bits/0.1\%; Accuracy $\leq \pm 2 \%$ (galvanically isolated) |
| 6 | AO2- |  |  |
| 7 | GND |  | $24 \mathrm{~V}( \pm 15 \%)$; Max. load 250 mA (total load from EXT +24 V outputs), max. 150 mA from one board. See Figure 1-2. |
| 8 | GND |  |  |
| 9 | GND |  | $24 \mathrm{~V}( \pm 15 \%)$, in special applications where PLC type functions are included in the control module, this input can be used as external auxiliary power supply for control boards as well as for I/O boards. |
| 10 | $+24 \mathrm{~V}$ |  |  |

NOTE: This expander board can be placed into four different slots on the control board. Therefore, the ' X ' given in the Parameter reference shall be replaced by the slot letter ( $\mathrm{B}, \mathrm{C}, \mathrm{D}$, or E) depending on the slot which the expander board is plugged into. See section 1-6.

## 3-2.4 OPT-B5

Description: I/O expander board with three relay outputs.
Allowed slots: B, C, D, E
Type ID:
16949
Terminals: Three terminal blocks; Screw terminals (M3); No coding Jumpers: None
Board parameters: None

TABLE 3-19. OPT-B5 I/O TERMINALS

| Terminal |  | Parameter reference Keypad/NCDrive | Technical information |
| :---: | :---: | :---: | :---: |
| $\begin{aligned} & 22 \\ & 23 \end{aligned}$ | RO1/common RO1/normal open | DigOUT:X. 1 | Switching capacity $24 \mathrm{VDC} / 8 \mathrm{~A}$ <br>  $250 \mathrm{VAC} / 8 \mathrm{~A}$ <br>  $125 \mathrm{VDC} / 0.4 \mathrm{~A}$ <br> Min. switching load $5 \mathrm{~V} / 10 \mathrm{~mA}$ |
| $\begin{aligned} & 25 \\ & 26 \end{aligned}$ | RO2/common RO2/normal open | DigOUT:X. 2 | Switching capacity $24 \mathrm{VDC} / 8 \mathrm{~A}$ <br>  $250 \mathrm{VAC} / 8 \mathrm{~A}$ <br>  $125 \mathrm{VDC} / 0.4 \mathrm{~A}$ <br> Min. switching load $5 \mathrm{~V} / 10 \mathrm{~mA}$ |
| $\begin{aligned} & 28 \\ & 29 \end{aligned}$ | RO3/common RO3/normal open | DigOUT:X. 3 | Switching capacity $24 \mathrm{VDC} / 8 \mathrm{~A}$ <br>  $250 \mathrm{VAC} / 8 \mathrm{~A}$ <br>  $125 \mathrm{VDC} / 0.4 \mathrm{~A}$ <br> Min. switching load $5 \mathrm{~V} / 10 \mathrm{~mA}$ |

NOTE: This expander board can be placed into four different slots on the control board. Therefore, the ' X ' given in the Parameter reference shall be replaced by the slot letter (B, C, D, or E) depending on the slot which the expander board is plugged into. See section 1-6.

## 3-2.5 OPT-B8

Description: Temperature measuring board with three Pt-100 sensor (3-wire) inputs. The measurable temperature range is -30 to $200 \mathrm{C}^{\circ}$ on Pt-100 input. Both 3-wire and 2-wire elements can be used.
Allowed slots: B, C, D, E
Type ID: 16952
Terminals: One terminal block; Screw terminals (M2.6); No coding Jumpers: X2
Board parameters: None

TABLE 3-20. OPT-B8 I/O TERMINALS

| Terminal |  | Parameter Reference on <br> Keypad and ADDaptACC | Technical information |
| :--- | :--- | :--- | :--- |
| 1 | $\mathrm{R} 1+$ | AnIN:X.1 | PT100 Input, -30 to $200^{\circ} \mathrm{C}$, one sensor. <br> Accuracy $<1^{\circ} \mathrm{C}$. <br> Sensor current 10 mA. |
| 2 | Rm 1 |  |  |
| Accuracy $<1^{\circ} \mathrm{C}$. |  |  |  |
| 3 | $\mathrm{R} 1-$ |  | Sensor current 10 mA. |

## Connection of PT100 Sensors

One PT100-sensor can be connected to the first two inputs (terminals 1 to 3 and 4 to 6) and up to three sensors to the third input (terminals 7 to 9 ). The sensors must be connected in series with a two- or three-wire connection. See selections below.

Connection of several sensors

3-wire connection

2-wire connection

NOTE:

- This expander board can be placed into four different slots on the control board. Therefore, the ' X ' given in the Parameter reference shall be replaced by the slot letter ( $\mathrm{B}, \mathrm{C}, \mathrm{D}$, or E ) depending on the slot which the expander board is plugged into. See section 1-6.
- Insulation level $4 \mathrm{kV} / \mathrm{sqrt}(2)$ (DIN VDE $0110-1$ ). 2 kV in sensor and 2 kV in option board.

## Jumper Selections

Up to three PT100 sensors can be connected to the third PT100 input. You can select the number of sensors in use with jumper block X2:

= Factory default

3-2.6 OPT-B9

Description: I/O expander board with five $42 \ldots 240$ VAC digital inputs and one normal relay output.
Allowed slots: $\quad$ B, C, D, E
Type ID:
16953
Terminals: One terminal block; Screw terminals (M2.6); No coding Jumpers: None
Board parameters: None

TABLE 3-21. OPT-B9 I/O TERMINALS

| Terminal |  | Parameter Reference on Keypad and ADDaptACC | Technical information |
| :---: | :---: | :---: | :---: |
| 1 | ACIN1 | DigIN:X. 1 | Digital input, 42 to 240 VAC (threshold 35 V ) Control voltage: " 0 " $<33 \mathrm{~V}$, " 1 " $>35 \mathrm{~V}$ |

| 4 | ACIN4 | DigIN:X. 4 | Digital input, 42 to 240 VAC (threshold 35V) Control voltage: " 0 " $<33 \mathrm{~V}, ~ " 1 ">35 \mathrm{~V}$ |
| 5 | ACIN5 | DigIN:X. 5 | Digital input, 42 to 240 VAC (threshold 35V) Control voltage: " 0 " $<33 \mathrm{~V}, ~ " 1 ">35 \mathrm{~V}$ |
| 6 | COMA |  | Digital input, 42 to 240 VAC (threshold 35V) Control voltage: "0"<33V, "1">35V |
| 7 8 | RO1/common RO1/normal open | DigOUT:X. 1 | Switching capacity $24 \mathrm{VDC} / 8 \mathrm{~A}$ <br>  $250 \mathrm{VAC} / 8 \mathrm{~A}$ <br>  $125 \mathrm{VDC} / 0.4 \mathrm{~A}$ |

NOTE: This expander board can be placed into four different slots on the control board. Therefore, the ' X ' given in the Parameter reference shall be replaced by the slot letter (B, C, D, or E) depending on the slot which the expander board is plugged into. See section 1-6.

## 3-2.7 OPT-BB

Description: Absolute encoder board for ACCel500 with inputs for an Endat type encoder. Programmable control voltage, fast digital inputs and simulation pulse output.
The output pulse is produced from sinusoidal input signals.
The galvanically isolated fast digital inputs are used to trace very short pulses.
Allowed slots: C
Type ID: 16962 (main board), 16963 (secondary board). The secondary board is mounted on top of the main board
Terminals: $\quad$ Two terminal blocks; Screw terminals (M2.6); No coding
Jumpers: $\quad 1 ;$ X11
Board parameters: Yes
An absolute encoder is a type of encoder capable of specifying its absolute position. The position data is retained even during a power failure or breakdown. The position data carried by the absolute encoder can be used by the frequency converter motor control in the control of a synchronous motor.

| Encoder cable | Heidenhain cable; <br> Max. length 100 m |
| :--- | :--- |
| Encoder voltage | $5 \mathrm{~V}, 12 \mathrm{~V}$ or 15 V <br> Max. current consumption 300 mA |
| Measuring steps/revolution | 4.2 billion (max. 32-bit) |
| Distinguishable revolutions | $0-65535$ (max. 16-bit) |
| Signal periods/revolution | $1-65535$ |

ENDAT is a bidirectional synchronic serial interface for absolute encoders. For example, the encoder position data can be read and encoder parameters can be set via the ENDAT connection. It also forwards the messages related to the encoder functions.

All Endat connections are available in terminal X6. The board uses Endat version 2.

## I/O Terminals on OPT-BB, Encoder Terminal X6

TABLE 3-22. I/O TERMINALS ON OPT-BB, TERMINAL X6

|  | Terminal | Heidenheim Color Code | Technical Data |
| :---: | :---: | :---: | :---: |
| 1 | DATA+ | Grey | Data line 120 $/$ /RS-485 |
| 2 | DATA- | Pink |  |
| 3 | CLOCK+ | Violet | Clock line 120 / /RS-485$(200-400 \mathrm{kHz})$ |
| 4 | CLOCK- | Yellow |  |
| 5 | A+ | Green/black | $1 \mathrm{Vpp}( \pm 0,5 \mathrm{~V})$; impedance $120 \Omega$; Max. input 350 kHz |
|  |  |  |  |
| 6 | A- | Yellow/black |  |
| 7 | B+ | Blue/black | $1 \mathrm{Vpp}( \pm 0,5 \mathrm{~V})$; impedance $120 \Omega$; Max. input 350 kHz |
|  |  |  |  |
| 8 | B- | Red/black |  |
| 9 | GND | White/green | Input ground |
| 10 | Encoder voltage | Brown/green | Selectable encoder voltages: $5 \mathrm{~V}, 12 \mathrm{~V}$ and 15 V Max. current consumption 300 mA |

| 10 | CMB | Common FDIN2 |

## Jumper Selections

On the OPT-BB board, there is one jumper block used to program the control voltage (auxiliary voltage). The factory default and other available jumper selections are presented below.
Jumper block X11
Auxiliary voltage level

TABLE 3-24. OPT-BB BOARD PARAMETERS

| Code | Parameter | Min | Max | Default | Selections | Description |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 7.3.1.1 | Reverse | 0 | 1 | 0 | $0=\mathrm{No}$ <br> $1=\mathrm{Yes}$ | Manually selectable rotation direction |
| 7.3.1.2 | Reading rate | 0 | 4 | 1 | $0=\mathrm{Not}$ <br> used <br> $1=1 \mathrm{~ms}$ <br> $2=5 \mathrm{~ms}$ <br> $3=10 \mathrm{~ms}$ <br> $4=50 \mathrm{~ms}$ | Incremental pulse reading rate. <br> Note: Use value 1 in Closed Loop mode. |
| 7.3.1.3 | Interpolation | 0 | 1 | 0 | $0=\mathrm{No}$ <br> $1=\mathrm{Yes}$ | If activated, the sinusoidal incremental pulses are <br> used to calculate the polar angle in order to <br> optimize the encoder accuracy |

TABLE 3-25. OPT-BB BOARD MONITORING VALUES

| Code | Monitored Value | Unit | Description |
| :---: | :--- | :--- | :--- |
| 7.3 .2 .1 | Reverse | Hz | Motor speed in Hz calculated from encoder pulses |
| 7.3 .2 .2 | Encoder speed | rpm | Motor speed in rpm calculated from encoder pulses |
| 7.3 .2 .3 | Encoder position | - | Absolute position of encoder read from Endat |
| 7.3 .2 .4 | Encoder revolution |  |  |
| 7.3 .2 .5 | Encoder fault |  |  |
| 7.3 .2 .6 | Encoder warning |  |  |
| 7.3 .2 .7 | Encoder messages |  | Number of messages between encoder and NXOPTBB |

TABLE 3-26. OPT-BB BOARD INFORMATION PAGES

| Code | Information | Unit | Description |
| :---: | :---: | :---: | :---: |
| 7.3.3.1 | Encoder type |  | $0=$ No encoder connected <br> $1-4=$ Incremental linear encoder <br> $5=$ Linear absolute encoder <br> 6 = Unknown <br> $7=$ Linear absolute encoder <br> 8 = Unknown <br> 9-12 = Rotational incremental/angular encoder <br> 13 = Absolute encoder (single turn) <br> 14 = Unknown <br> $16=$ Unknown |
| 7.3.3.2 | Pulses/Revolution |  | Sinusoidal pulses/revolution |
| 7.3.3.3 | Position bits | bit | Accurate position 1-1024 (10bit $=210=1024$ ) |
| 7.3.3.4 | Revolution bits | bit | Accurate number of revolutions $1-1024(10 \mathrm{bit}=210=1024)$ |

## OPT-BB Option Board Status LEDs

## Yellow LED

| LED State | Meaning |
| :--- | :--- |
| OFF | Option board not activated |
| ON | Option board in initialization state waiting for activation command from the frequency <br> converter |
| Blinking fast <br> (once/sec) | Option board is activated and in RUN state <br> $\bullet \quad$ Option board is ready for external communication |
| Blinking slow <br> (once $/ 5$ s) | Option board is activated and in FAULT state <br> $\bullet \quad$ Internal fault of option board |

Green LED

| LED State | Meaning |
| :--- | :--- |
| OFF | Option board not activated |
| ON | Encoder is being initialized <br> Option board is reading encoder parameters |
| Blinking fast <br> (once/s) | Encoder detected by option board <br> Option board receives data from encoder |
| Blinking slow <br> (once/5 s) | Encoder detected by option board <br> Option board cannot read encoder data or data is invalid (CRC error, broken cable etc.) |

## 3-3 ADAPTER BOARDS OPT-D_

The adapter boards do not provide any additional I/O but are used to connect the frequency converter to an Avtron communication bus (System Bus, SPI, CAN). Note that if you use any of the major fieldbuses (Profibus, Modbus etc.) for communication, you will need a corresponding fieldbus board. For more information, see the specific fieldbus board manual.

NOTE: In order to avoid incompatibility problems, do not plug two adapter boards into the same control board.

TABLE 3-27. ACCEL500 ADAPTER BOARDS

| I/O board | Allowed slots | Description |
| :--- | :--- | :--- |
| OPT-D1 | D,E | System Bus adapter board |
| OPT-D2 | (B,)D,E | System Bus adapter board with interface to fast monitoring bus |
| OPT-D3 | D,E | RS-232 adapter board |
| OPT-D6 | B,D,E | Monitor Bus adapter board for ACCe1500 |

## 3-3.1 OPT-D1

Description: System Bus adapter board for ACCel500
Allowed slots: D, E
Type ID: 17457
Terminals: Double optical input and output terminals. Agilent HFBR-1528 (Receiver), HFBR-2528 (Transmitter).
Jumpers: None
Board parameters: None

TABLE 3-28. OPT-D1 I/O TERMINALS

| Terminal |  | Technical Information |
| :---: | :---: | :--- |
| $\mathbf{1}$ | H1 | System Bus optical input 1 (RX1) <br> Use 1-mm optical cable (e.g. Agilent HFBR- <br> RUS500 \& HFBR-4531/4532/ 4533 connectors) |
| $\mathbf{2}$ | H2 | System Bus optical input 2 (RX2) <br> Use 1-mm optical cable (e.g. Agilent HFBR- <br> RUS500 \& HFBR-4531/4532/4533 connectors) |
| $\mathbf{3}$ | H3 | System Bus optical output 1 (TX1) <br> Use 1-mm optical cable (e.g. Agilent HFBR- <br> RUS500) |
| $\mathbf{4}$ | H4 | System Bus optical output 2 (TX2) <br> Use 1-mm optical cable (e.g. Agilent HFBR- <br> RUS500) |

NOTE: The terminals of the board are protected with a rubber pin. Be sure to leave the pin in the unused terminals in order to avoid disturbances.

Use Avtron P/N A33242_-xx (where _xx is cable length in meters) fiber optic cable for interconnection between drives.

## Connections between Frequency Converters with OPT-D1

Basic connection:
Connect output 1 of Device 1 to input 2 of Device 2 and input of Device 1 to output 2 of Device 2. Note that, in the end devices, one terminal pair remains unused. See Figure 3-13 below.

TABLE 3-29. MAX COMMUNICATION SPEED - OPT-D1

| Max. <br> Number of Devices <br> In Line | Max. <br> Speed Achieved <br> [Mbit/s] |
| :---: | :---: |
| 3 | 12 |
| 6 | 6 |
| 12 | 3 |
| 24 | 1.5 |

Figure 3-13. Basic Connection of Frequency Converters with OPT-D1

## 3-3.2 OPT-D2

Description: System Bus adapter board for ACCel500 with single optical input and output; Interface to fast monitor bus used by the ADDaptACC tool.
Allowed slots: (B,)D, E. NOTE: If only the Monitor Bus (terminals 21 to 23) will be used, the board can also be placed in slot B. The System Bus is then unavailable. Therefore, remove jumpers X5 and X6. See Figure 3-14.
Type ID: 17458
Terminals:
Single optical input and output; one screw terminal block (M3), Agilent HFBR-1528 (Receiver), HFBR-2528 (Transmitter).
Jumpers: 4; X3, X4, X5 and X6. See Figure 3-14.
Board parameters: None

TABLE 3-30. OPT-D2 I/O TERMINALS

| Terminal |  | Technical Information |
| :---: | :--- | :--- |
| $\mathbf{1}$ |  | System Bus optical input 1 (RX1) <br> Use 1-mm optical cable (e.g. Agilent HFBR-RUS500 <br> \& HFBR-4531/4532/ 4533 connectors) <br> NOTE: Not available if the board is placed in slot B |
| $\mathbf{2}$ |  |  |
|  | H1 | System Bus optical output 1/2 (TX1/TX2); <br> Selected with jumper X5 |
|  |  | Use 1-mm optical cable (e.g. Agilent HFBR-RUS500 <br> \& HFBR-4531/4532/4533 connectors) <br> NOTE: Not available if the board is placed in slot B |
| $\mathbf{2 1}$ | CAN_L | Monitor Bus negative data |
| $\mathbf{2 2}$ | CAN_H | Monitor Bus positive data |
| $\mathbf{2 3}$ | CAN_SHIELD | Monitor Bus shield |

Use Avtron P/N A33242__xx (where _ $x x$ is cable length in meters) fiber optic cable for interconnection between drives.

## Jumper Selections

There are four jumper blocks on the OPT-D2 board. The factory defaults and other available jumper selections are presented below.

$=$ Factory default

* If the board is placed in slot B the SystemBus is not available. Remove jumpers $\times 5$ and $\times 6$.

Figure 3-14. Jumper Selections for OPT-D2

## Connections Between Frequency Converters with OPT-D2

## Special Connection

In this connection example, the leftmost device is the Master and the others are slaves. The Master can send and receive data from the slaves. The slaves cannot communicate with each other. Changing of masters is not possible; the first device is always the Master.

The OPT-D2 board in the Master has the default jumper selections, i.e. X6:1-2, X5:1-2. The jumper positions have to be changed for the slaves: X6: 1-2, X5:2-3.

TABLE 3-31. MAX COMMUNICATION SPEED - OPT-D2

| Max. <br> Number of Devices <br> In Line | Max. <br> Speed Achieved <br> [Mbit/S] |
| :---: | :---: |
| 3 | 12 |
| 6 | 6 |
| 12 | 3 |
| 24 | 1.5 |

Figure 3-15. Connection Example of Frequency Converters with OPT-D2

## 3-3.3 OPT-D3

Description: RS-232 adapter board. Galvanically decoupled. Used mainly for application engineering to connect another keypad.
Allowed slots: D, E.
Type ID:
Terminals:
17459
9-pin female sub-D-connector
Jumpers:
1; X3)
Board parameters: None

TABLE 3-32. OPT-D3 I/O TERMINALS

| Terminal |  | Technical Information |
| :--- | :--- | :--- |
| 1 |  |  |
| 2 | TxD | Transmit data |
| 3 | RxD | Receive data |
| 4 |  |  |
| 5 | GND | Ground isolated |
| 6 | +9 V | +9V isolated |
| 7 |  |  |
| 8 |  |  |
| 9 |  |  |

## Jumper Selections

There is one jumper block on the OPT-D3 board. The factory defaults and other available jumper selections are presented below:

OPT-D3 Option Board Status LEDs

| LED | Meaning |
| :--- | :--- |
| Green (LED 1) | Receiving data |
| Red (LED 2) | Transmitting data |

3-3.4 OPT-D6

Description: Monitor Bus adapter board for ACCel500. Interface to fast monitor bus used by the ADDaptACC tool.
Allowed slots: B, D, E.
Type ID:
17462
Terminals: One screw terminal block (M3)
Jumpers: 2; X3, X4.
Board parameters: None

TABLE 3-33. OPT-D6 I/O TERMINALS

| Terminal |  | Technical information |
| :--- | :--- | :--- |
| 21 | CAN_L | Monitor Bus negative data |
| 22 | CAN_H | Monitor Bus positive data |
| 23 | CAN_GND | Monitor Bus ground |

## Jumper Selections

There are two jumper blocks on the OPT-D6 board. The factory defaults and other available jumper selections are presented below:

Figure 3-16. Jumper Selections for OPT-D6
